About me

I am a passionate programmer who loves solving complex problems and creating innovative solutions. I'm always seeking to learn new technologies and improve my technical skills. I'm a creative person, results-oriented, with a strong work ethic. I'm excited about the opportunity to contribute to challenging projects and work in a dynamic team where I can continue to grow professionally.

Experience Work

DESCAR ARGENTINA

2023/ Present- Developer Backend.

- C#: I have gained extensive experience in this language through its use in the majority of projects I have participated in. My dedication to working with C# has allowed me to develop strong skills and a deep understanding of its features and functionalities.
- SqlServer: My experience has focused on this database management system, where I have conducted numerous queries and operations. This extensive practice has provided me with a solid understanding of SQL Server and its capabilities, as well as advanced skills in data optimization and manipulation.
- Python: I have accumulated extensive experience working with this programming language in several projects. My focus on Python has involved solving complex problems and developing efficient solutions. This experience has provided me with a deep understanding of best practices in Python.
- XML: My experience includes managing data in XML format, where files provided by clients are processed and stored in an intermediate database using SQL Server. Through queries and the use of C#, I have worked on transforming this data to achieve desired results.

What am I doing now?

Currently, I'm immersed in learning frontend development, aiming to complement my skills in backend. This integration will provide me with a more comprehensive understanding of application development, allowing me to approach projects holistically. Among the areas I'm focused on and continue to deepen are:

- **HTML5:** I have acquired knowledge about the semantic structure of web pages, the use of multimedia elements, improvements in forms, and the integration of APIs such as Geolocation. I am focused on developing more dynamic and engaging web experiences by leveraging the capabilities of HTML5 to the fullest.
- **CSS3:** I have learned to style and design web pages using techniques such as advanced selectors, transitions, and animations. Additionally, I have explored responsive design features and the capabilities of flexbox and grid to create more dynamic and adaptable layouts. I am focused on integrating these skills to enhance the appearance and usability of the web applications I develop.
- **JavaScript:** In JavaScript, I have acquired basic skills to add interactivity to web pages, including handling the DOM and managing user events. I am focused on further delving into these concepts to create more dynamic and engaging web experiences.

- **Git and GitHub:** I have used Git and GitHub as key tools for managing and collaborating on software development projects with my team. Through Git, we have maintained effective version control, enabling us to collaboratively work on code, track changes, and merge contributions efficiently. On GitHub, we have organized our code repositories, managed issues and tasks, and facilitated code review among team members.

Education

Systems Analyst

2021-2024

Instituto Remedios de Escalada de San Martin.

Scrum Foundation Professional Certificate

2022 - 2022

Certiprof

Scrum Foundation Certified

2022 - 2022

SCRUMstudy

Course in C#

2023 - 2023

Edutin Academy.

Course in Javascript

2023 - 2023

Edutin Academy.

I share the link to my first webpage, which I have created using the knowledge acquired during my first month in frontend development.
